## Bounding Boxes

This technote discusses some of the problems that may show up when using third party graphics. When placing graphics with T<sub>E</sub>X, a proper (or at least well defined) boundingbox is a prerequisite.

## Equal Font Metrics

TEX has a reputation that even after years you can still get the same output from the same source. Unfortunately this is not true: macro packages change, hyphenation patterns are updated, and font metrics are not as constant as the font design itself. This technote demonstrates that it really matters what metrics you choose.
